

Day 2 Quiz

Geometry Summer Credit | Slope, Lines, and Transversals

Name:	Date:	Score:
-------	-------	--------

Directions: Choose the best answer for multiple-choice items. Show work for short-response items.

1. What is the slope through (1, 4) and (5, 10)?
A $\frac{2}{3}$ B $\frac{3}{2}$ C $-\frac{3}{2}$ D 6
2. A line has slope -4. What is the slope of a perpendicular line?
A -4 B 4 C $\frac{1}{4}$ D $-\frac{1}{4}$
3. Which pair of slopes represents perpendicular lines?
A $\frac{2}{5}$ and $\frac{2}{5}$ B $\frac{3}{4}$ and $-\frac{4}{3}$ C -6 and $-\frac{1}{6}$ D 0 and 0
4. Parallel lines are cut by a transversal. Corresponding angles are labeled $5x - 8$ and 72. What is x ?
A 12.8 B 16 C 64 D 80
5. Same-side interior angles are:
A congruent B complementary C supplementary D always 90 degrees
6. Error analysis: A student says the slope through (2, 9) and (8, 3) is 1 because both coordinates change by 6. Identify and correct the error.

Day 2 Quiz

Continued

- | | |
|----|--|
| 7. | Find the slope through $(-3, -2)$ and $(6, 4)$. Then give the slope of a parallel line. |
|----|--|

- | | |
|----|--|
| 8. | Alternate interior angles are labeled $7x + 5$ and $3x + 49$. Find x and the angle measure. |
|----|--|

- | | |
|----|--|
| 9. | Spiral review: Find the midpoint of $(-6, 10)$ and $(4, -2)$. |
|----|--|

- | | |
|-----|---|
| 10. | Written reasoning: Explain how you decide whether a transversal angle equation should use equality or a sum of 180 degrees. |
|-----|---|
