

Day 19 Exit Slip

Geometry Summer Credit | Arc Length and Sector Area

Name:	Date:	Score:
-------	-------	--------

Directions

Write $\theta/360$ first and leave exact answers in terms of π .

1.	A circle has radius 12 and central angle 150 degrees. Find the arc length.
2.	The same circle has radius 12 and central angle 150 degrees. Find the sector area.
3.	Convert 210 degrees to radians.
4.	Explain why the arc and sector in items 1 and 2 use the same fraction but different full-circle formulas.
