

Day 08 Guided Notes

Geometry Summer Credit | Similarity Transformations, Scale Factor, and AA Similarity

Name:	Date:	Period:
-------	-------	---------

Fill In the Big Ideas
Similar figures have the same _____ but proportional _____.
A scale factor greater than 1 makes a figure _____.
A scale factor between 0 and 1 makes a figure _____.
Two triangles are similar by AA when two pairs of _____ match.

Decision Box: What Am I Trying to Find? ☐ scale factor ☐ missing side ☐ whether figures are similar ☐ whether triangles are similar by AA	Diagram Annotation Routine 1. Mark matching angles. 2. Label corresponding sides. 3. Write the scale factor. 4. Box the unknown value.
--	---

Worked Example With Missing Steps
Triangle ABC is similar to triangle DEF. AB = 6, DE = 15, BC = x, EF = 20.
Step 1: Circle what you need to find: scale factor missing side similarity proof
Step 2: Match corresponding sides: AB <-> DE and BC <-> _____
Step 3: Set up one consistent proportion: $6 / 15 = x /$ _____
Step 4: Cross multiply: $6(\text{_____}) = 15x$
Step 5: Solve: $x =$ _____

Sentence Frames These figures are similar because _____. The scale factor from Figure A to Figure B is _____. I know these sides correspond because _____.	Error Analysis A student sets up $6 / 15 = 20 / x$. What went wrong? _____ Correct setup: _____ _____
--	---

Exit Summary
Today similarity means _____
One proportion setup I can use is _____
One mistake I need to avoid is _____
