

Day 10 Exit Slip

Geometry Summer Credit | Right-Triangle Similarity

Name:	Date:	Score:
-------	-------	--------

Directions

Show the relationship or proportion you used.

1.	An altitude to the hypotenuse splits the hypotenuse into segments 4 and 16. Use $h^2 = pq$ to find h .
2.	Triangle ABC is similar to triangle DEF. $AB = 7$, $DE = 21$, $BC = 12$. Find EF.
3.	A parallelogram has consecutive angles $x + 30$ and $2x$. Find x .
4.	Why does an altitude to the hypotenuse create similar right triangles?
