

Day 13 Quiz

Geometry Summer Credit | Sine, Cosine, and Tangent

Name:	Date:	Score:
-------	-------	--------

Directions

Choose the best answer for multiple-choice items. Show trig setups for short-response items.

1.	Which ratio is opposite over hypotenuse? A sine B cosine C tangent D inverse tangent
2.	Which ratio should be used when the known sides are opposite and adjacent? A sine B cosine C tangent D Pythagorean theorem only
3.	A right triangle has angle 30 degrees and hypotenuse 10. The opposite side is: A 5 B 8.7 C 10 D 20
4.	To find an angle when opposite = 6 and hypotenuse = 15, use: A $\sin^{-1}(6/15)$ B $\cos^{-1}(6/15)$ C $\tan^{-1}(15/6)$ D $\sin(6/15)$
5.	Before choosing sine, cosine, or tangent, you must identify the: A reference angle B longest leg C area D perimeter
6.	A right triangle has angle 40 degrees and hypotenuse 18. Find the opposite side.
7.	A right triangle has angle 52 degrees and adjacent side 13. Find the opposite side.

Day 13 Quiz

Continued

8.	A right triangle has adjacent side 9 and hypotenuse 15 from angle B. Find angle B.
----	--

9.	A ladder is 25 ft long and reaches 20 ft up a wall. Find the angle the ladder makes with the ground.
----	--

10.	Spiral review: A 30-60-90 triangle has short leg 10. Find the long leg and hypotenuse.
-----	--

11.	Error analysis: A student says $\tan(35) = \text{adjacent/opposite}$. Explain and correct the ratio.
-----	---
