

Day 5 Exit Slip

Geometry Summer Credit | Triangle Congruence

Name:	Date:	Score:
-------	-------	--------

Directions

Show enough reasoning that someone can follow your matching parts.

1.	Name the congruence shortcut: two sides and the included angle are congruent.
2.	Triangle ABC is congruent to triangle XYZ. If $AC = 18$, which side in triangle XYZ is 18?
3.	Find x : triangle DEF is congruent to triangle JKL, $DE = 2x - 1$, and $JK = 15$.
4.	Error analysis: A student says AAA proves congruence. Correct the statement.
