Directions

This replaces today's daily quiz. Show work for short-response items. Use exact values unless a problem asks for an explanation.

1.	Find the missing angle in a triangle with angles 39 degrees and 82 degrees. A 49 degrees B 59 degrees C 98 degrees D 121 degrees
2.	Which transformation preserves side lengths and angle measures? A dilation by 2 B translation C vertical stretch D scale drawing
3.	Rotate $(-4, 6)$ 180 degrees about the origin. A $(4, -6)$ B $(-6, -4)$ C $(6, -4)$ D $(-4, -6)$
4.	Triangle ABC is congruent to triangle DEF. Which side corresponds to BC? A DE B EF C DF D AB
5.	Which information is enough to show two triangles are congruent? A AAA B SSA C SSS D one side only
6.	An exterior angle is 124 degrees. One remote interior angle is 53 degrees. Find the other remote interior angle. A 53 degrees B 71 degrees C 109 degrees D 124 degrees
7.	Reflect $P(5, -8)$ across the x-axis.

Day 5 Weekly Assessment

Continued

- | | |
|----|--|
| 8. | Triangle JKL is congruent to triangle MNP. If $KL = 3x + 4$ and $NP = 22$, find x . |
|----|--|

- | | |
|----|---|
| 9. | Name the congruence shortcut: two angles and a non-included side match. |
|----|---|

- | | |
|-----|--|
| 10. | Lines have slopes $-2/5$ and $5/2$. Are the lines parallel, perpendicular, or neither? Explain. |
|-----|--|

- | | |
|-----|--|
| 11. | Error analysis: A student says two triangles are congruent because all three angles match. Identify the mistake. |
|-----|--|

- | | |
|-----|---|
| 12. | Written reasoning: Explain how rigid motions support the idea of triangle congruence. |
|-----|---|
