

Day 14 Exit Slip

Geometry Summer Credit | Trig Modeling

Name:	Date:	Score:
-------	-------	--------

Directions

Draw or label a right-triangle model. Write the trig equation and round to the nearest tenth.

- | | |
|----|---|
| 1. | A person stands 28 ft from a building. The angle of elevation to the roof is 46 degrees. Find the building height. Assume eye level is at the ground. |
| 2. | From the top of a 60-ft tower, the angle of depression to a car is 33 degrees. Find the horizontal distance to the car. |
| 3. | A surveyor's instrument is 4 ft above the ground and 50 ft from a tree. The angle of elevation to the top is 39 degrees. Find the total tree height. |
| 4. | Explain one difference and one connection between angle of elevation and angle of depression. |
