Directions

Choose the best answer for multiple-choice items. Show work for short-response items.

1.	Which set of side lengths can form a triangle? A 3, 4, 7 B 5, 6, 12 C 6, 8, 10 D 2, 9, 12
2.	A triangle has side lengths 8, 13, and x . Which range is correct? A $5 < x < 21$ B $5 \leq x \leq 21$ C $x < 21$ D $x > 5$
3.	In a triangle, the largest angle is opposite the: A shortest side B longest side C median D midsegment
4.	Find the midpoint of (4, 9) and (10, -1). A (6, 8) B (7, 4) C (14, 8) D (3, 5)
5.	A side of a triangle is 30 units. A midsegment parallel to it is: A 15 B 30 C 45 D 60
6.	Find the distance between A(-2, 1) and B(4, 9).

Day 6 Quiz

Continued

7.	Can 9, 12, and 22 form a triangle? Explain.
----	---

8.	Find the range for x if triangle side lengths are 10, 14, and x .
----	---

9.	A median from vertex A meets side BC at its midpoint. If $B(3, -5)$ and $C(11, 7)$, find the point where the median meets BC.
----	--

10.	Spiral review: Triangle ABC is congruent to triangle XYZ. If angle B = $4x - 9$ and angle Y = 83 degrees, find x .
-----	--

11.	Error analysis: A student says 4, 6, and 10 form a triangle because $4 + 6 = 10$. Correct the reasoning.
-----	---
