## Directions

Use  $k$ ,  $k^2$ , or  $k^3$  carefully. Include units when needed.

|    |                                                                                                          |
|----|----------------------------------------------------------------------------------------------------------|
| 1. | Two similar solids have scale factor 3. If the smaller volume is 20 cubic units, find the larger volume. |
| 2. | A figure is enlarged by scale factor 4. What happens to its area?                                        |
| 3. | A solid has mass 360 g and volume $120 \text{ cm}^3$ . Find density.                                     |
| 4. | Explain why volume scale uses $k^3$ instead of $k$ .                                                     |
