

Day 7 Quiz

Geometry Summer Credit | Quadrilaterals and Coordinate Evidence

Name:	Date:	Score:
-------	-------	--------

Directions

Choose the best answer for multiple-choice items. Show work for short-response items.

1.	In a parallelogram, opposite sides are: A perpendicular B congruent C always different D supplementary
2.	A rectangle always has: A four congruent sides B congruent diagonals C exactly one pair of parallel sides D no right angles
3.	A rhombus always has: A four congruent sides B four right angles C congruent diagonals D exactly one pair of parallel sides
4.	A quadrilateral with one pair of parallel sides is at least a: A square B rectangle C trapezoid D rhombus
5.	The slope from (2, 1) to (8, 4) is: A 2 B $\frac{1}{2}$ C $-\frac{1}{2}$ D 3
6.	A parallelogram has consecutive angles $x + 15$ and $2x$. Find x and both angle measures.

Day 7 Quiz

Continued

- | | |
|-----|---|
| 7. | A rectangle has diagonals $4x - 5$ and 31 . Find x . |
| 8. | Find the midpoint of diagonal AC if A(-3, 6) and C(5, -2). |
| 9. | Use coordinate evidence: A quadrilateral has opposite side slopes 2 and 2, and the other pair has slopes $-1/2$ and $-1/2$. What can you conclude? |
| 10. | Spiral review: Can 6, 7, and 14 form a triangle? Explain. |
| 11. | Error analysis: A student says every rectangle is a square because both have right angles. Correct the statement. |
