

Day 28 Student Handout

Geometry Summer Credit | Final Readiness Review

Name:	Date:	Period:
-------	-------	---------

Learning Targets

I can review the most important Geometry skills from the course. I can explain my thinking on mixed problems. I can connect this course to Algebra 2 and Trigonometry readiness.

Lesson 28A: Final Readiness Review

Warm-Up

1.	Find the distance between $(-2, 3)$ and $(10, 8)$.
2.	Write the equation of a circle with center $(4, -1)$ and radius 6.
3.	A right triangle has angle 42 degrees and adjacent side 15. Find the hypotenuse to the nearest tenth.

Final Strategy

Before calculating, name the topic: coordinate geometry, transformations, similarity, trig, circles, measurement, or modeling. Then choose the formula or relationship that matches the units and diagram.

Problem	Work / notes
A circle has radius 10 and central angle 72 degrees. Find sector area.	Topic: Fraction: Formula: Answer:
Two similar solids have scale factor 3. The smaller volume is 20 cubic units. Find the larger volume.	Topic: Scale rule: Answer:
A package has volume 240 cm^3 and density 5 g/cm^3 . It must weigh at most 1500 g. Does it meet the constraint?	Topic: Mass: Decision:

Day 28 Student Handout

Lesson 28B | Algebra 2 and Trig Transition

What Carries Forward?

Readiness Connections

Algebra 2 uses equations, graph transformations, functions, radicals, systems, and modeling.
Trigonometry uses right-triangle ratios, angle measure, radians, circles, and proportional reasoning.

Problem	Work / notes
Algebra 2 bridge: Describe the transformation from $y=x^2$ to $y=(x-5)^2+3$.	Horizontal shift: Vertical shift:
Trig bridge: Convert 180 degrees and 90 degrees into radians.	180 degrees: 90 degrees:
Modeling bridge: Explain why a reasonable answer needs a number, a unit, and a decision.	Number: Unit: Decision:

4.	Which Geometry skill do you think will help you most in Algebra 2 or Trigonometry? Explain.
----	---

5.	Write one piece of advice to your future math self.
----	---
