

Day 1 Exit Slip

Geometry Summer Credit | Coordinate Geometry and Angle Relationships

Name:	Date:
-------	-------

Directions: Show enough work that someone else can follow your thinking. Use exact values when possible.

1.	Find the distance between (3, -1) and (9, 7). Leave your answer exact and give a decimal estimate.
----	--

2.	Find the midpoint of (-4, 10) and (8, -2).
----	--

3.	A classmate swaps x-values and y-values when using the midpoint formula. How would you help them catch the error?
----	---

Turn this in before the daily quiz.
